WATER IS 75' FROM THE SURFACE IN 1963

Here you see a state-monitoring well's data spanning six decades. The downward slope isn't theoretical, it represents a very real decline. If we allow more extraction and export from our aquifer, we are adding stress to an already declining system.

We need to ask ourselves: Are we confident that this permit will not accelerate that decline for our wells in Wilson County—especially in ongoing drought conditions and with large-scale data centers coming in that will further increase demand for water?

74' DROP IN OUR WATER LEVEL AND TRENDING DOWN

WATER IS 149' FROM THE SURFACE IN 2025!
